

# KLINGSPOR, USA: CarryPick for Expanding Inventory

## The Customer and Their Requirements

**KLINGSPOR, one of the world's leading manufacturers of high-quality abrasive products, was quickly outgrowing its manufacturing and distribution center in North Carolina. A planned expansion was an ideal time to bring automation into the facility.**

**Working with Swisslog, KLINGSPOR deployed 16 CarryPick AGVs supporting 962 storage racks, two pick stations and one replenishment station. Swisslog's SynQ CarryPick Director was integrated with KLINGSPOR's warehouse management system for automation control.**

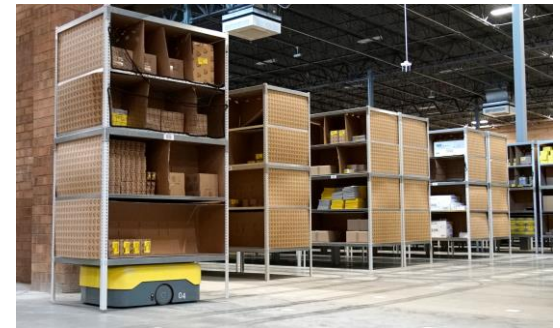

**CarryPick has a number of advantages for a company like KLINGSPOR. It can be deployed in an existing facility without modifications, offers exceptional scalability for future growth and can provide the continuous reliability the business needs. If a robot has to be taken off-line for service, the remaining robots automatically compensate for the missing robot to keep orders flowing.**
