

## EMH NOMAD® Solves Changing Lift Needs

### Features and Benefits:

Modular NOMAD® Free Standing Crane Systems are perfect solutions when overhead crane installation is either difficult or impractical.

NOMAD Cranes are easily assembled in existing facilities to fit virtually any manufacturing situation. They can then be disassembled, relocated and reassembled.

EMH NOMAD Crane Systems have load capacities ranging from 2 to 10 tons.

**Industry Group:** Crane Manufacturers Association of America (CMAA)

### Quote:

*“Not only did the crane work well from a standpoint of functionality, the installation appeared as if it had been part of building design since day one.”*

Justin Kleckner  
Degelman Operations Manager

*Acculift, an EMH Distributor, provided Degelman with a custom NOMAD Free-Standing Crane solution.*

Degelman Industries is in the business of manufacturing and servicing industrial and farm equipment. According to the company, Degelman accomplishes its mission through meticulous design and vigilant customer service. To improve customer service even more, Degelman needed to retrofit a building not initially designed to support additional loads.

Prior to calling on its local EMH distributor, Degelman handled all heavy lifting by forklift, which had its limitations. Acculift, an EMH distributor, had a better idea and provided a custom crane solution. By integrating a free standing modular EMH NOMAD Crane that also maximizes lifting height, Acculift helped Degelman improve the building's customer service capability.

According Justin Kleckner, Degelman Operations Manager, “First, we needed a solution that allowed all doors and exits to be completely accessible so that we

could back-in large products for service, quickly and easily. Two, we needed to maintain a wide-open floor footprint that provided as much service flexibility as possible. And third, we needed to have crane columns positioned so that they would not be disruptive to our service crew.”

Although EMH NOMAD Crane Systems have load capacities that range from 2 to 10 tons, Acculift customized and installed a solution to fit Degelman needs exactly, using a 3-ton capacity NOMAD Crane. With bolted assembly, placement of the crane was seamless and consistent with Degelman positioning needs. Kleckner said, “Not only did the crane work well from a standpoint of functionality, the installation appeared as if it had been part of building design since day one.”
