

Wildeck's SmartControl™ Offers Advancement in VRC Technology

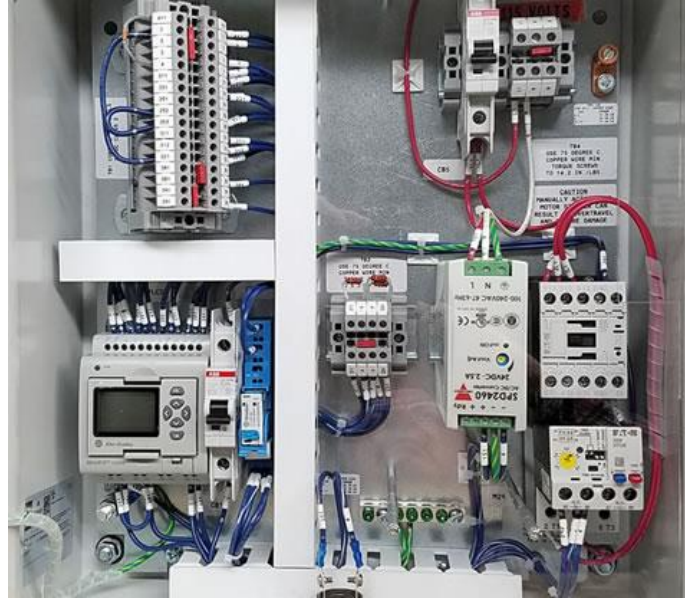

Features and Benefits

- Major advancement in VRC technology
- Immediate and specific fault notification
- Best value for VRC investments

Industry Group: CSS Industry Group

“Wildeck's SmartControl™ system eliminates all of the guesswork, allowing for rapid issue resolution.”

Kelly Kamlager
Director of Marketing, Wildeck

Wildeck's SmartControl™ system provides the best overall value and ease of operator use for your VRC investment.

Wildeck's SmartControl™ system for hydraulically operated lifts is a major advancement in control technology for vertical reciprocating conveyors (VRCs). Older controls had “relay logic” that stopped the VRC on an error without signaling the cause of the problem. Users were left wondering, “Did the VRC stop because it was loaded with too much weight? Did it run out of hydraulic oil or did someone push the E-Stop button?”

With Wildeck's SmartControl™, users are immediately informed that a fault has occurred, and the specific cause of the fault, by an audible alarm that has an adjustable volume control. Five short, four long and continuous tones are annunciated for different errors that are described on easy-to-read placards provided at each station and at the main control panel.

Wildeck's advanced SmartControl™ system provides the best overall value and ease of operator use for your VRC investment.
