ABB US is a manufacturer of medium voltage switchgear, reclosers, and padmount switches at their Florida facility. The recloser is a circuit breaker which is 42"W x 30"D x 40"H.

The Problem: The workers were using a standard crane/hoist with pendent to maneuver the switches but the limited movement increased safety concerns with pinch-points due to multiple lift up/set down transfers between workstations during the process.

The company decided on a 165lb Capacity Easy Arm Q Intelligent Lifting Device from Gorbel.
