

## Gorbel G-Force®: Reducing Labor Costs and Providing Safe Solutions for Powder Coating Company

**Industry:** Powder Coating Industry

**Product:** Powder coating

**The Problem:** Congested work area, excess labor.

**The Solution:** Gorbel G-Force Intelligent Lifting Device

### Background

Enviro-Tech is a powder coating company that primarily focuses on the agricultural industry and also powder coats materials used in the oil field, medical and automotive industries. Grain bin foundations were loaded onto a powder coating line.

### The Problem

Foundation loading was accomplished using two men who were required to lift the bin foundations onto the line with a forklift. The foundation gets cleaned, powder coated, and dried and then is removed from the line. This was a slow labor intensive process.

### The Solution

The solution was a G-Force Intelligent Lifting Device. The loading and unloading of product isn't the choke point of the operation anymore and the labor requirements are half of what they were previous to installing the G-Force.
