

## *Easy Arm® Easily Adapts to Automotive Assembly Process*

### Features and Benefits:

- Fast, effortless lifting and moving has led to increased productivity
- Float mode to align and position fixtures
- Grip and pitch tooling to load dunnage racks

### Background

A large muffler manufacturer had concerns about worker safety and fatigue during the assembly process of their exhaust assemblies.

### The Problem

The welding area of assembly required workers to lift the large exhaust assemblies multiple times between welding cells. Not only was this process a safety concern, but it caused fatigue and a slowdown in production.

### The Solution

The company decided on several Easy Arms with slide handle controls and custom gripper end tooling. The new setup allows a single operator to move the exhaust assemblies all around the welding area effortlessly and quickly.
