

SELF LEVELING CART

Features and Benefits
KEEPS MATERIAL AT OPTIMAL
ERGONOMIC HEIGHT.

Industry Group: EASE

Self-leveling towable cart

A customer required a towable train system for a work center where machined parts were added to plastic layers. A towable cart with a spring loaded self-leveling platform was designed to both maximize efficiency and make sure that the operators were adding the components to the plastic layers in a safe ergonomic zone. Specifically, the self-leveling system allowed each stack to lower automatically when completed by the operator. This allowed the operator to place the material at a safe and optimal height to maximize efficiency.
