

Coffing Hoists offers Electric Chain Hoists for Special Application

Features and Benefits

Capacities 1/4 to 4 Tons

Rotating and Positioning Items of Any Shape

Proven Coffing Quality

Ease of Operation

Coffing Hoists Lifetime Warranty

Industry Group: Hoist Manufacturers Institute (HMI)

The hoist has two load hooks that are color coded to match the control station. The hooks work in opposite directions, as one hook lifts, the other lowers, rotating the load.

The two hooks are controlled by a single pendant, giving the operator complete control of the item rotation and position.

One of the worlds leading earth moving and heavy equipment manufactures were the first to utilize the EC Turnover hoist. The original application was to rotate a large engine block during the machining process. The Turnover hoist operated with such

ease that the end users added units in other areas of their manufacturing operation.
