

## Series 35 Scissor Lift Used On Oil Field Truck to Lift Control Cabin

### Features and Benefits

- Custom to fit mounting fixture
- Special 24VDC Power Unit

**Industry Group:** MHI INDUSTRY GROUP LMPS

OPTIONAL QUOTE FROM CASE STUDY

### The Challenge

A leading provider of products and services to the oil & energy industry needed a solution for lifting control cabins above their truck's equipment for best visibility during on-site operations.

### The Autoquip Solution

Autoquip specially designed a Series 35 scissor lift that is mounted on the truck trailer and operates off the truck's 24VDC power and is controlled from inside the cabin.

A few design modifications were made to the Series 35 scissor lift to fit the application requirements:

- A custom mounting plate was fabricated onto the Series 35 platform for a custom fit to the control cabins mounting fixture.
- We also engineered a special 24VDC power unit to be powered by the trucks existing power.

## Solution Benefits

The flexibility in design of the Series 35 scissor lift was simple to customize for this application and has led to improved on-site operations. The customer ordered 20 units and is planning to order more for their truck fleet.
