

Freight Carriers Find an affordable Loading Dock

Features and Benefits

- Numerous dock positions at an affordable price
- Adding durable equipment to withstand heavy volume and use

Industry Group: Loading Dock Equipment Manufacturers (LODEM)

The Opportunity

With numerous facilities and many loading dock positions, freight carriers need an affordable option for dock levelers.

The Solution

Where the dock height and the trailer heights are even or within a few inches of each other the DLM edge-of-dock leveler offers the most affordable way of loading and unloading. This industry is unique in that they are servicing only their own fleet of trucks, allowing them to build their docks level with their trailer height. The edge of dock leveler was invented by DLM for the trucking industry in the 1960's, and is used exclusively by most major carriers nationwide. The unit used here is the NL7220 Neverlift edge of dock unit. Edge-of-docks are simple, affordable, reliable, safe, easy to operate and maintain, making them the clear choice for the freight line industry.
