

Work Station Crane Helps Commercial Printer Increase Safety And Decrease Product Damage

Features and Benefits

Business: Commercial Printer

Product type: Ceiling Mounted Work Station Crane

Lifting Device: Mechanical Roll Lifting Device (provided by others)

Industry Group: Monorail Manufacturers Association, Inc. (MMA)

Industry: Commercial Printer - Lithographic

Application:

Lifting, changing, and moving print rollers weighing 65 lbs. The work area serves two twin printing presses with a 15 ft. wide aisle between presses.

Gorbel® Solution:

A Ceiling Mounted Work Station Crane with an aluminum bridge was chosen to serve the two work cells. It was a GLCSLX500/250- 15AL-34 with a chain hoist and custom mechanical roll lifting device.

The Problem:

- The heavy print rollers were being maneuvered by one person.
- High risk of injury because loads were lifted up and

away from the body.

- Manual lifting was causing damage to the print rollers.

Why Gorbel Was The Smart Solution:

The workers in the cells are thrilled with the crane system. It covers both work areas without taking up floor space and they no longer have to manually lift the heavy print rollers, saving their backs from injury. There has also been a decrease in the amount of damaged product.
