

First Line of Defense for your Uprights

Features and Benefits

Designed to protect the most critical part of your upright: the first 24 inches. Made of structural steel, with a bull nose in the front to protect the anchor. Taller options are available. Can also accommodate seismic footplates. Powder coated in orange, for increased visibility and security. Easy to install, it comes with all the necessary hardware. No unloading of your racking system is necessary during installation.

Industry Group:

The Protective Guarding Manufacturers Association (ProGMA)

Upright Protectors

The Opportunity

A newly appointed warehouse manager inherited the responsibility of a facility with a lot of damage due to impact from forklift traffic. A rack survey report highlighted a damage pattern observed throughout the warehouse: the damage to the upright columns was generally occurring below 12 inches, in a consistent manner.

The Solution

The undamaged columns were outfit with guards as a preventive measure against future damage. Since the damage trend was occurring on the bottom portion of the uprights, protecting the columns with a 24" guard solution helped avoid direct column contact with moving equipment and prevent future damage. By adding guards to the racking system, the life of the racks was extended, the investment was protected and the overall safety of the warehouse was increased.
