

## Safety is Key at Niagara Bottling

### Features and Benefits

Modular design, minimal maintenance, and 100% hygienic

**Industry Group:** MHI INDUSTRY GROUP

“The key factors that drove Niagara to change its standard approach to protective barriers on recent projects were A-SAFE’s modular approach, damage-preventing design, and overall commercial competitiveness.”

*All black barriers line walkways to segregate vehicles from pedestrians.*

### **SITUATION:**

At a new facility 40-miles south of Milwaukee, Niagara Bottling was looking to protect brand new equipment and create pedestrian walkways, as well as ensuring the site complied with OSHA standards for overall health and safety. The work would be the first part of an ongoing project to be rolled out over the next three years.

### **PRODUCTS:**

A-SAFE utilized five key products in order to supply the safety solutions the company were looking for: **iFlex** 3-Rail Pedestrian Barrier, **iFlex** Traffic Plus

Barrier, Lift Gates, Swing Gates and Bollards.

**INSTALLATION:**

The first ever **iFlex** installation in the USA took place over one week and included specially-manufactured black barriers as requested by Niagara Bottling.

**SOLUTION:**

Walkways were defined and created by **iFlex** 3-Rail Pedestrian Barriers, Lift and Swing Gates, helping to organize the facility, manage crossing points and segregate pedestrians from workplace vehicles. Traffic Plus Barriers offered robust protection for key electrical paneling, while Bollards marked and guarded doorways. Overall, the facility was protected and exceeded the expectations of Niagara's high level of hygiene and safety.

**CUSTOMER QUOTE:**

"The key factors that drove Niagara to change its standard approach to protective barriers on recent projects were **A-SAFE's** modular approach, damage-preventing design, and overall commercial competitiveness."
