

Wildeck Mezzanine Increases Operational Efficiency

Features and Benefits

- Multiple facility consolidation
- Centralized storage location
- Increased productivity

Industry Group: Protective Guarding Manufacturers Association (ProGMA)

“The core location of the mezzanine maximizes our efficiency and keeps everything within easy reach.”

Terry Pridgen
Plant Superintendent, Ferguson Box

A centrally located Wildeck mezzanine helped Ferguson Box improve their operational efficiency.

When Ferguson Box decided to consolidate their two locations (totaling 212,000 sq. ft.) into one modern facility (totaling 185,000 sq. ft.), they knew that addressing the reduction in their total building space would be a unique challenge. The company's end-goal in consolidating facilities was to maximize profitability by keeping overhead costs low. After carefully investigating their potential options, it became evident that the most economically advantageous route was to utilize the building's existing overhead space and install an industrial mezzanine.

The company's new mezzanine functioned as a centralized location for accessing the equipment necessary for production. This new level of organization drastically cut down on the amount of time that employees spent looking for tools and equipment. The mezzanine also proved to be a safe storage space for some of the printing company's more delicate equipment. Repair costs and time spent waiting for replacement parts to arrive began to dramatically decline following the mezzanine's integration.

In the end, Ferguson Box's overall operational efficiency increased as a direct result of their investment in a Wildeck mezzanine.
