

Wildeck's Wilgard® Protects Critical Systems & Conveyors

Features and Benefits

- 900 linear feet of Wildeck's Wilgard® in one location
- Protection for investments in equipment and personnel
- Safe and efficient facility operation

Industry Group: ProGMA

“Everything is designed to work better, smarter and faster, and the guard rail is in place to protect our facility, inventory and most importantly, our people.”

Martin Drapacz
Western Operations Manager, CDW

Wildeck's Wilgard® Guard Rail played a pivotal role in protecting CDW's investments in equipment and (most importantly) personnel.

CDW's state-of-the-art Western Distribution Center in North Las Vegas, NV is the future of product distribution. At more than 513,000 square feet, the North Las Vegas facility is the second largest Distribution Center operated by CDW and primarily serves customers throughout the western United States. When the decision was made to build a facility in North Las Vegas, the development team wanted to design one of the most modern and efficient distribution centers with a floor plan and equipment placement that best utilized the available space.

To keep CDW's new building operating at peak capacity, it was decided that Wildeck's Wilgard® Guard Rail (painted safety yellow) would be used to protect the facility's conveyors and other critical systems. With over 900 linear feet of 44-inch high double rail spanning eleven acres of interior floor space, Wildeck's Wilgard® would play a pivotal role in protecting CDW's investments in equipment and (most importantly) personnel.

Wildeck's Wilgard® Guard Rail is available in three levels of impact resistance (XTra Tough, Medium Toughness and Lighter Toughness) and offers a wider range of impact resistance than any other U.S. manufacturer.
