

## Wildeck Mezzanine Creates Central Storage Location

### Features and Benefits

- Improved operational efficiency
- Facility consolidation
- Centralized storage location

**Industry Group:** Storage Manufacturers Association (SMA)

“The core location of the mezzanine maximizes our efficiency and keeps everything within easy reach.”

Terry Pridgen  
Plant Superintendent, Ferguson Box

*By utilizing a Wildeck mezzanine as a core storage location, the operational efficiency at Ferguson Box was improved.*

After consolidating their two locations (totaling 212,000 sq. ft.) into one modern facility (totaling 185,000 sq. ft.), Ferguson Box knew that addressing the reduction in total available space at their new facility would be a unique challenge. The consolidation of the company's facilities was done to maximize profitability and keep overhead costs low. Through the course of their investigations, it became apparent that the most economically advantageous way to obtain additional square footage was through the installation of a Wildeck industrial mezzanine.

The company's new Wildeck mezzanine would serve as a centralized location for accessing the tools and equipment necessary for production. As a result of this new level of organization, the amount of time that employees spent looking for tools and equipment was drastically reduced. The Wildeck mezzanine also proved to be a safe storage space for the company's delicate printing equipment. Consequently, repair costs and time spent waiting for replacement parts to arrive began to decline following the mezzanine's integration.

Wildeck is proud to have helped Ferguson Box achieve greater operational efficiency at their facility through the integration of an industrial mezzanine.
