

Wildeck Mezzanine Resolves Square Footage Dilemma

Features and Benefits

- Extended facility lifespan
- Designated area for product storage and packing
- Simplified operations for domestic and international shipments

Industry Group: Storage Manufacturers Association

“The real test for us was getting a partner who could make this project work in our environment with little disruption and Wildeck did just that.”

Ron Harris
VP of Real Estate, Construction and Facilities for Young Living Essential Oils

Through the installation of a Wildeck mezzanine, Young Living Essential Oils was able to obtain more than 7,000 square feet of space.

As Young Living Essential Oils struggled to keep pace with the market's growing demand, they knew that the limited amount of available space within their facility was the barrier to success. When the company's initial fulfillment center was built, it was only intended to serve the business for five years. When the five-year mark arrived, the company realized that relocating operations would mean moving away from the employees and community that had made the business a success. In investigating ways to extend their current facility's lifespan, Young Living was exposed to the idea of a Wildeck mezzanine.

A Wildeck mezzanine platform would prove to be Young Living's most efficient and economical solution for continued growth within their current facility. Through the installation of their new steel work platform, the company was able to add more than 7,000 square feet of workable space to their facility. Specifically, the mezzanine's deck would serve as a product storage and packaging area, allowing the company to simplify their operations for domestic and international shipments. Most importantly, the new addition would allow Young Living to remain in the community that had contributed to the company's initial growth and success.
