

Wildeck's Wilgard® Keeps Facility Functioning

Features and Benefits

- Integration of multiple material handling solutions
- Enhanced levels of protection for valuable equipment
- Undisrupted facility operations

Industry Group: ProGMA (Protective Guarding Manufacturers Association)

“We worked closely with Wildeck and it was the right decision. These solutions worked out great.”

Authorized Wildeck Dealer

The strategic integration of Wildeck's Wilgard® Guard Rail throughout Baker Distributing's facility helps keep operations moving.

Baker Distributing is a Vermont-based, family-owned and operated beer, wine and non-alcoholic beverage distribution company. In contemplating ways to cost-effectively expand their facility, the company decided to integrate four Wildeck mezzanine platforms. These mezzanines would serve as the storage location for the company's delicate, liquid merchandise. To ensure the smooth and efficient transportation of their merchandise to and from the mezzanine's deck, Baker Distributing decided to install Wildeck vertical reciprocating conveyors (VRCs) to handle the product transportation.

Given the crucial role that the Wildeck VRCs would play in keeping product flowing through the facility, Baker Distributing decided to invest in Wildeck's Wilgard® Guard Rails. Available in three levels of impact resistance (XTra Tough, Medium Toughness and Lighter Toughness), Wildeck's Wilgard® Guard Rail systems offer a wider range of impact resistance than any other U.S. manufacturer. By placing Wilgard® Guard Rail around the VRCs, the company ensured that the guard rail would absorb the impact of any forklift collisions, allowing facility operations to proceed uninterrupted.

Wildeck's Wilgard® Guard Rail provides both a strong physical and visual barrier, enhancing a facility's safety.
