ID PARCEL & MAIL SOLUTIONS

Engineering Automation.
Delivering Success.

Innovative. Nimble. Accessible.

ID Parcel & Mail Solutions designs and builds package and mail automated sortation systems for e-commerce shipping, postal services, domestic presort, international mailing, private-delivery services, as well as corporate and governmental incoming mail.

We bring intimate knowledge of the parcel and mail automation industry, and the technology required to optimize the process. We configure cost effective systems using creative solutions. And our team is available to you throughout the entire process.

How We Stand Out

We do more than just build systems here. We deliver a fully comprehensive solution by employing a holistic approach that addresses the full range of project needs including the following steps:

Design

Manufacture

Configure

Deliver

Install

Train

Service

Support

A Range of Products for a Range of Budgets

Name your need, we can help. From table-top systems for low-volume applications – including semi-automated OCR handling of parcels, flats and M-Bags – to large BCR and OCR systems for parcels, packets, and mail processing, to custom-designed solutions for special projects and applications. We can handle it, regardless of size or scope.

Organizations That Have Put Their Trust In Us

Table-Top Systems

Not all customers have the volume for a fully automated processing system. We provide a range of creative, lower priced semi-automated solutions that reduce labor per piece, provide data capture, and finalize a package or mail piece for its next processing step.

The Mixed Mail Workstation (MMW system) provides a fast mail, packet and parcel processing solution for international items. OCR can be added for package information such as customs data or unique tracking barcodes. And for USPS flat and parcel mail classes, our OCR workstation systems provide IMb and IMpb barcodes, postage payment and USPS worksharing discounts while meeting the USPS processing requirements.
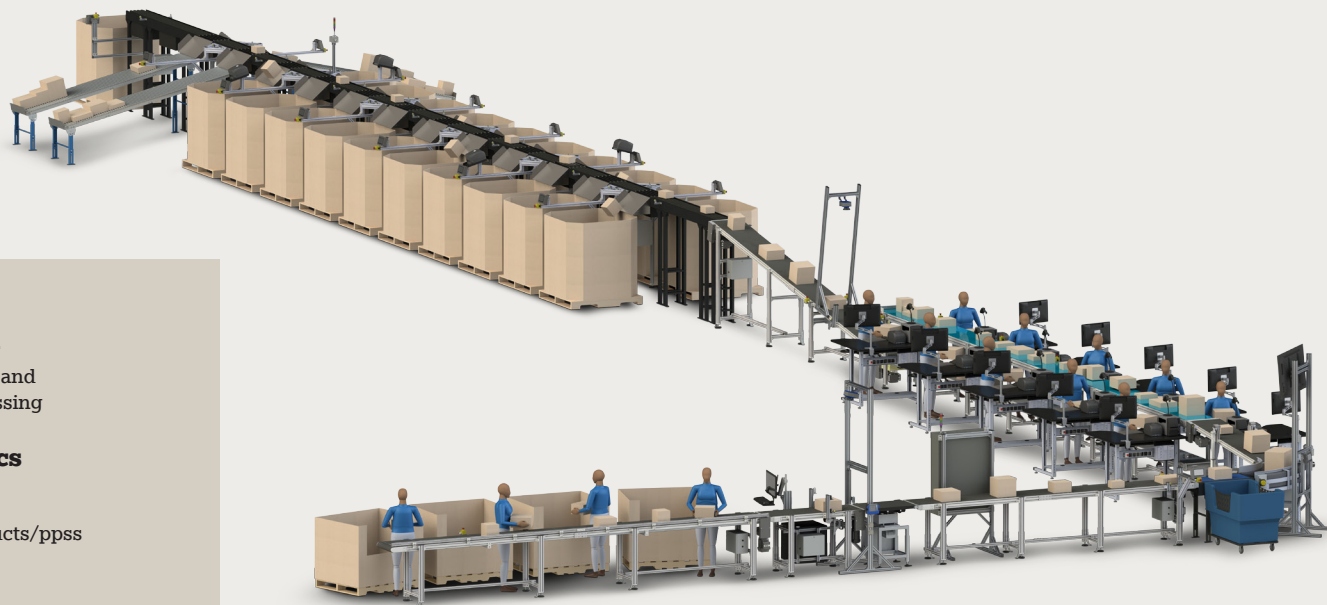

With configurations for volumes as low as 200 pieces per day to multi-station systems for up to 5,000 pieces per day, ID Mail tailors the workstation systems to your needs.

Packet Parcel Family of Systems

The packet parcel family of systems: AFFORDABLE; FLEXIBLE, RELIABLE! Capable of processing small packets or flats up to medium size parcels, with numerous features and options. The Packet Parcel Sorting System can be configured to meet your processing and sorting volume needs. The system has several sorting technologies to choose from and can accommodate a variety of output containers. Whether your production requires OCR or Barcode Reading, ID Mail provides a complete package processing solution that pays for itself very quickly with the ability to grow as your business grows. Economically priced but designed for industrial production for lower volume applications, the Packet Parcel Sorting System is your be all do all solution to maximize profits!

The Packet Parcel Sorting System, At a Glance

- System control and user interface

- Induction stations with gap guidance

- Imaging for BCR and/or OCR processing

- Volumetric dimensioning and weighing sub-systems

- Industrial conveyors, safety system and electrical controls

- Customized interfaces to customer IT systems or USPS, WORLD.ware, INC.ware or custom address recognition software

- Simple to complex data interfaces including SQL for data for all packages processed and interfaced to customer IT systems

- 2 to 10 manual labeling stations and/or automatic print and apply labeling

- 90 degree turn conveyors for flexible system layouts

- Sorting system configurable for 2 to 100 sort outlets and for a variety of outlet containers

BILL SICKENBERGER

CEO, The Mail Group

"

For over 15 years, ID Parcel & Mail has supported The Mail Group with innovative workstations and OCR Sorting Systems. To meet the changing needs of the cross-border processing of dutiable goods, The Mail Group again reached out to ID Mail for an OCR and Customs Data Capture solution that ID Mail added to its versatile MMW Systems for a low cost and very effective solution. I truly appreciate the flexible, creative, and reasonably priced approach to automation and support that ID Mail provides our companies.
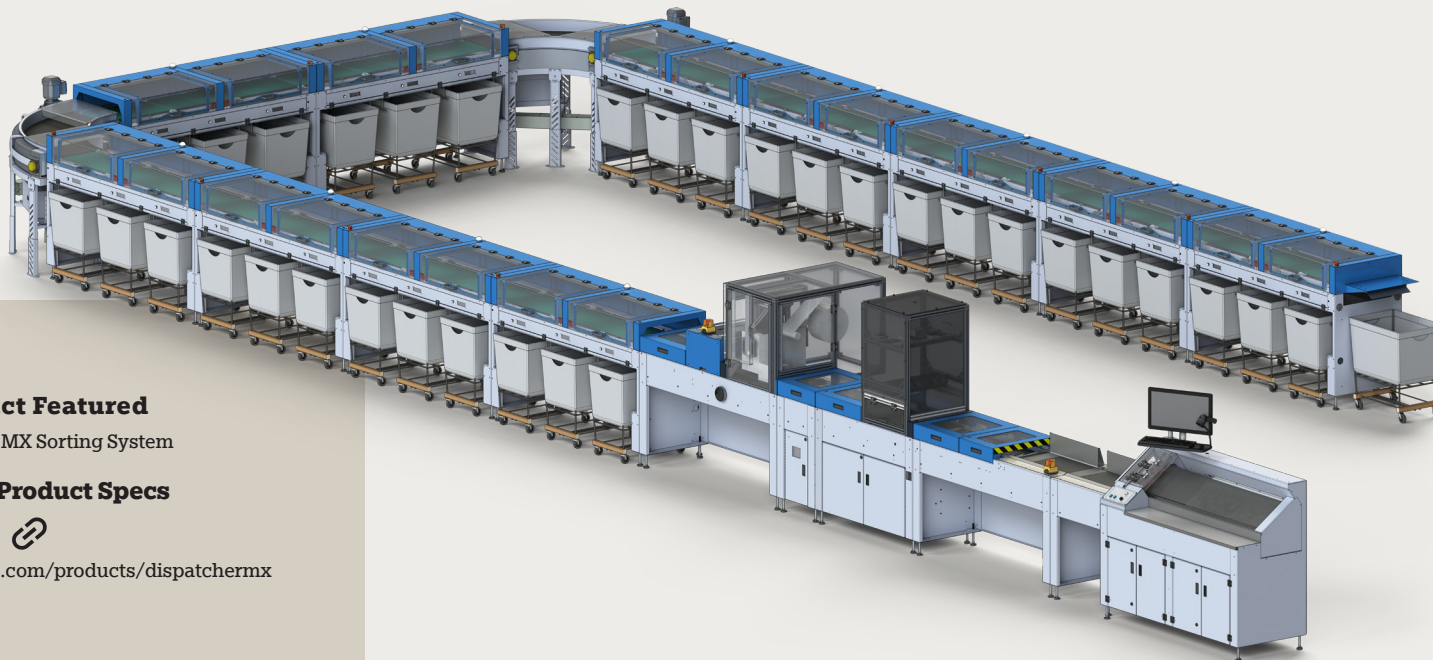

Dispatcher Family of Systems

You're looking at the total mail processing solution for incoming, postal, international and private-delivery markets. Appropriately named, these workhorse systems dispatch even your toughest sorting challenges. With the goal of improving processing and sorting and helping you realize serious labor savings and data collection, our

Dispatcher mixed mail-sorting line automates:

- International mailing and remailing
- USPS presort for worksharing discounts
- Postal operator automation
- Private delivery couriers
- Corporate and academic mail center processing
- Special sorting applications for other industries

Loaded with features from multi-line OCR, Barcode Reading, inline weighing, format detection, labeling and printing to a CASS or WORLD.ware database, these systems are built for feeding and reading flexibility, maximum mail piece dimension range, excellent throughput, rugged reliability and affordable price points. One sorting system for a full range of mail piece sizes!

ROB DIVINCENZO
CEO, Asendia USA

"

When it comes to global mail and parcel processing, ID Mail is a key technology partner for Asendia USA. Since 2000, with our first Dispatcher sorting system, we have expanded the number and types of systems from ID Mail at multiple locations nationwide. ID Mail's industry-leading WORLD.ware international cross-border address coding software, and their creativity at continually updating and enhancing our systems, have allowed us to keep systems in production for decades with a tremendous return on investment.
