

ProCommerce
VERTICAL BAGGER SERIES

> **Bubble Material Bagging Solution For E-Commerce businesses**

The ProCommerce bagging solution utilizes flat stock material offering cost savings over pre-made bags. The ProCommerce system can run opaque mailing film and/or bubble mailing material. Each package is "right sized" based on the product being bagged thus advancing the correct length to minimize material used. A shipping label can be automatically attached to the package.

Individual or multiple items can be loaded based on your particular application.

FEATURES AND BENEFITS

- Utilizes flat stock bubble or opaque mailing material
- Right sizing of the package in the vertical dimension to optimize freight costs
- Easy to load/operate
- Integration with ID Technology Print & Apply Labeler
- Scanner option for label verification & courier sorting
- Speeds of approximately 10-15 packages per minute
- Discharge Conveyor to bring product to load height
- No ties to a film contract

TYPICAL PRODUCT SPECIFICATIONS

Standard Vertical Seal	18"
Standard Horizontal Seal	24"
Bag Sizing	10" X 10" minimum to 18" X 24" maximum
Bag Filled Weight	8 lb. maximum
Standard Jaw Opening	9 ¾"
Electrical Requirements	240 V, 3 PH, 60 HZ, 30 AMPS
Air Requirements	3 - 6 CFM per machine cycle at 80 PSI
PLC Platform	Allen Bradley PLC with HMI

LABEL VERIFICATION & COURIER SORTING OPERATIONAL SUMMARY

1. The operator starts the cycle process by scanning the bar code that accompanies the items needing to be bagged.
2. The ProCommerce System Integrated Barcode Scanner communicates with the customer's Warehouse Managing System, or barcode software, which enables the delivery of SKU information directly to the ID Technology 252 Print and Apply Labeler.
3. An optional Secondary Scanner can be added that allows ease of delivery, by controlling a 3 position discharge conveyor to sort packages to available courier totes. Effectively removing the complexity of mail sorting and increases accuracy to end consumers.
