ROLY® TOTAL CONTROL ACCESS (TCA) SAFETY GATE

The Roly® Total Control Access (TCA) pallet drop safety gate protects employees working on elevated pallet drop areas, ensuring the ledge is always guarded. The TCA is a power operated, dual-gate system but the gates don't operate in tandem; instead when one gate is opening or closing the other stays fully closed and is prevented from opening until the other fully closes.

Using a proprietary connection and technology system for fully-automatic operations, employees have no-touch, ergonomic fall protection systems that integrate with warehouse WMS and automated equipment.

Ideal safety gate for:
High volume fulfillment centers
Automated warehouse and material handling environments

- Photo eyes and sensors to detect objects or errors
- Built-in safety measures if errors occur to prevent the gates from dropping quickly
- Ability to integrate safety gate into WMS to capture operational and product data
- Meet OSHA and ANSI standards for fall protection
- Available in powder coated mild or electro-polished stainless steel
- Visit MezzGate.com to watch a TCA safety gate video and read case studies
