# Sliding Rack Guard

Protects Rack Bays

InCord®
Custom Safety Netting Solutions

The InCord Sliding Rack Guard (SRG) is a front-of-rack containment system designed to protect work areas from falling stored goods.

Sliding Rack Guard nets are ideal for pick modules found in warehouses, distribution centers, or manufacturing environments. This horizontally actuating system can be expanded to multi-bay height and width; allowing an expanding matrix of storage protection.

- **Adds versatility to picking operations**

- **Containment capacity of 1,500 lb**

- **Custom configurations for single or multi-bay systems**

The Sliding Rack Guard net is constructed from a high-strength synthetic mesh. The net is attached to two horizontal guide cables secured to unique bounding brackets. The system can be installed quickly with the use of standard hand tools.
