

# WebNets™ for Racking

High tension, low deflection containment.

**InCord®**  
Custom Safety Netting Solutions

Ensure the safety of employees and inventory by using InCord WebNet™ pallet rack netting. Our WebNet Rack Guard systems can be customized to your application needs.

The WebNet system is available in two configurations: flush-mount or offset. The flush mount option includes integrated straps that wrap around beams and uprights and can be hand-tensioned. The offset mount option allows clearance for larger products and pallets while still protecting against product falls and maintaining flue space.

WebNet has undergone testing to validate its exceptional strength. With a load rating of 2,500 lbs, it can handle heavy loads with utmost reliability.

We offer optional mesh liners to contain small items.

- High tension, low deflection containment
- Flush-mount or offset options
- No special tools or training required
- Custom attachment and liner options
