

Intelligent Lifting

Just Got Even Smarter

Gorbel®'s G-Force® and Easy Arm® Intelligent Lifting Devices now have the latest processor, so you get the most advanced features available in the intelligent lifting market today.

Our new cutting-edge units are available in two models. Our base model, the Q₂, comes loaded with programming features to handle most applications. Got a more complex operation? No worries! Our iQ₂ has additional IO points at the handle and in the actuator to give you even more configuration options.

Why are our new Q₂ and iQ₂ Intelligent Lifting Devices the smarter choice for lifting?

More User Friendly

You don't have to rely on the handle menu to program your unit! Our updated computer-based visualization interface makes it easy to configure your G-Force from your tablet or PC.

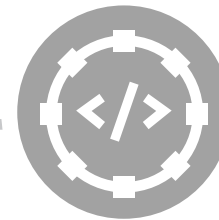

Smarter Q Unit

The new Q₂ model has more customizable handle-based IO options so it can handle a wider range of simple applications than the previous Q unit could.

Global Appeal

Our handle and visualization interfaces are now available English, French, German, Italian, and Spanish.

Less Need for Custom Programming

We added user configurable IO points on the iQ₂ model to limit the need for costly custom programming that our previous iQ unit sometimes required.

Cut the Cord

New built-in Wireless connectivity provides the ability to service, troubleshoot without the need for Ethernet and USB. (Ethernet and USB are still available as a standard).
