

Bridge Maintenance & Repair Travelers

Eliminate Lane Closures

- Safe and reliable access to inspect and maintain the underside of bridges
- Self propelled
- Weather hardened designs
- Stainless steel construction of non-painted surfaces
- On-board man lifts
- Optional features available to allow customization

MACKINAC BRIDGE, MICHIGAN (8 Installed)

Suspended Span Traveler

Factory Load and Operational Testing

- Complete operational testing at American Crane under simulated conditions
- Attention to detail assures success in the field

Bridge Maintenance & Repair Travelers

SAFTRACK™ Technology

- Allows operation on flexible runway
- Provides a custom solution using standard crane components
- Allows operation on uneven and out of alignment runways
- Anti-skew prevents skewing on flexible bridges
- Controls each traveler drive independently
- Installed over 25+ travelers
- Provides controlled acceleration and deceleration of the traveler
- Uses American Crane developed control software
- Uses field proven bridge crane components

User Friendly Operation and Reliability

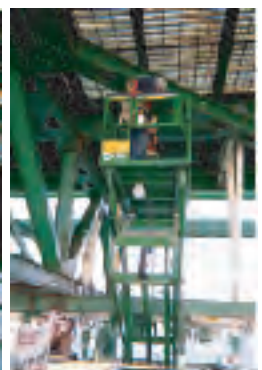

- Fully caged work platforms
- Non-slip operator platforms
- On-board man lifts improve accessibility
- OSHA compliant design
- Redundant "Drop Capture System" prevents traveler separation from bridge
- System diagnostics assures limited down time
- User friendly portable operator controls
