

Capabilities

At ProservCrane Group we offer a unique combination of strengths – design, fabrication, delivery, installation, field service, inspection and parts – all from one single source, performed by experienced, well-trained, dedicated people.

OVERHEAD CRANE PARTS SERVICING

ProservCrane Group is your leading source for all makes and models of crane parts and components. If your part is discontinued or not in stock, our engineering and fabrication departments can quickly design and manufacture custom solutions to meet your specifications and standards, regardless of the crane manufacturer.

INSTALLATION

To prevent potentially dangerous safety situations we provide installation and erection services of overhead cranes with unparalleled experience and expertise. We also provide start-ups of new hoists and cranes, as well as installation and start-ups of very large cranes, runways and electrification systems.

INSPECTION & MAINTENANCE

ProservCrane has gone to great measures to develop a preventative inspection and maintenance program for all of our crane and hoist products. We will also perform OSHA compliant inspections and maintenance services on any brand of overhead crane or hoist.

LOAD TESTING

At ProservCrane Group we pride ourselves in having the expertise and necessary equipment to effectively install and load test all our products. After an installation we will load test cranes at 125% of capacity verifying that the device or structure complies with OSHA specifications and safety requirements.

REFURBISHING

You can significantly increase your crane's performance and reliability with our modernization services. Our refurbishing services combine updated crane components with knowledge of technology. Heavy-duty process cranes will most likely be subject to many upgrades during their lives because of the tough nature of their work. We can modify and refurbish any brand of existing crane or runway; electrically, mechanically and structurally.

REPAIRS

Our service team is available 24/7 to avoid any downtime and our expert technicians will help you forecast component lifetime for virtually any make of crane.
