

Rise above sanitation requirements

Stainless steel alternating tread stairs from Lapeyre Stair are the recipe for a safe access solution with an easy-to-clean finish

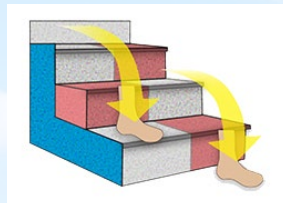

FEET TO BACK OF STEPS
LAPEYRE STAIR

MADE IN THE U.S.A. 

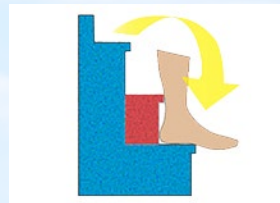

Also available in aluminum and steel powder coat.

How an alternating tread stair works

Conventional stairs
Each foot normally uses only half of each tread, stepping over the unused section.

Steep stairs/ladders
Increase in angle causes the unused half tread to become an increasing obstacle.

Alternating tread stairs
The unused half of each tread is removed to provide more usable tread depth.
