

Wireless Site Survey

Does your warehouse or distribution center have areas of radio frequency (RF) channel interference and weak signals, dead zones or network interruptions?

Modern businesses depend on their connectivity in order to perform at the optimal level. A well-designed WiFi plan will ensure a seamless wireless network, allowing strong, constant coverage that your workforce expect and need to work efficiently and securely.

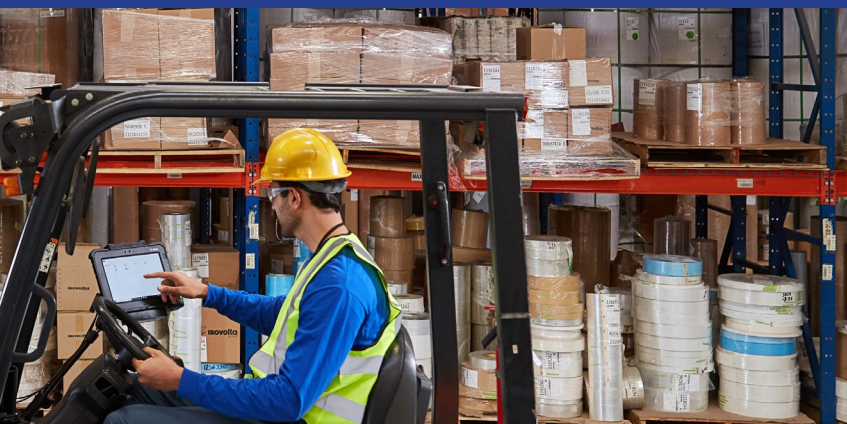

What to expect on a Wireless Site Survey

- Initial review of supporting documentation, such as logistics facility CAD drawing, warehouse blueprints, etc.
- Evaluation of current wireless infrastructure
- Prioritization for crucial locations
- In-person survey
- Final report with a tailored wireless network plan

Our highly trained and experienced staff of wireless engineers will conduct the survey with the highest professional quality, using the latest technologically advanced tools.

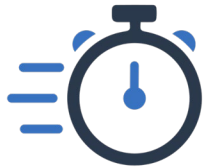

Boost Efficiency and Reduce Operational Downtime with BCI Wireless Site Survey

- No more dropped sessions
- Strong signal and fast connections
- No WiFi network interference

What We Do

Automatic Data Capture / Bar Coding

- Data collection solutions, hardware and integration
- Wireless site survey & installation

Warehouse Labeling

- Compliance labeling, custom labels, warehouse signs, RFID labels & tags
- Complete project management services

Warehouse Slotting

- *WarehouseVision*™ - Best-In-Class true virtual 3D simulation slotting solution
