Device Management System

Mobile device management (MDM) software provides secure and cost-effective deployment, management, and support of mobile computers and devices in an organization. Companies can control the software, hardware, security, and other aspects of mobile devices in order to ensure better security, compliance, and productivity.
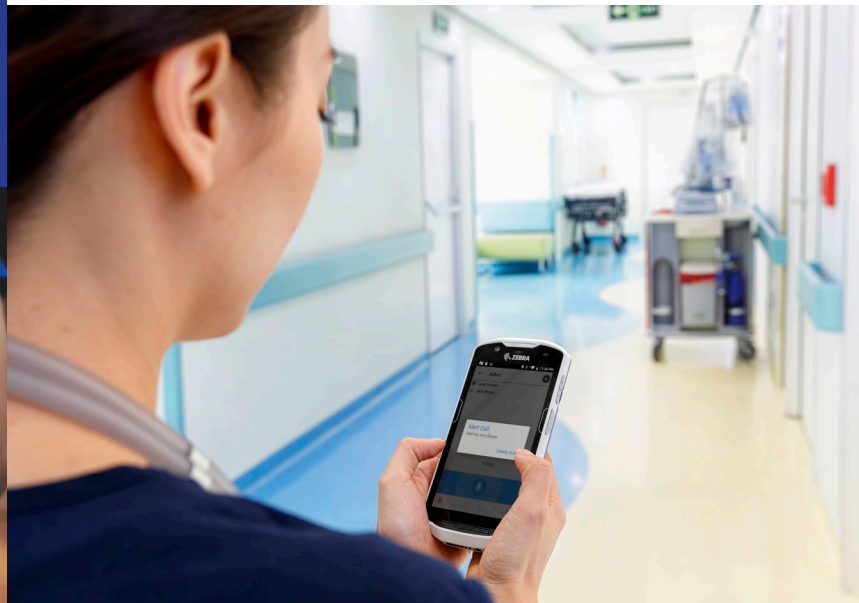

Who Needs MDM?

An MDM solution deployment works best for organizations with mobile workers who need access to company resources and database from multiple locations, allowing the secure management of all productivity tools, applications and employee data.

Some businesses use MDM solutions to manage corporate-owned devices such as laptops or tablets so that remote employees can work from anywhere in the world without worrying about losing access to critical business information.

Take Control of Your Devices

- Enhance Security

- Ensure Compliance

- Remote Monitoring, Support and Controlled Access

- Simplify BYOD Management

BCI

HIGHER EFFICIENCY

BETTER SECURITY

ACCURACY & PRODUCTIVITY

What We Do

Automatic Data Capture / Bar Coding
- Data collection solutions, hardware and integration
- Wireless site survey & installation

Warehouse Labeling
- Compliance labeling, custom labels, warehouse signs, RFID labels & tags
- Complete project management services

Warehouse Slotting
- *Warehouse*Vision™ - Best-In-Class true virtual 3D simulation slotting solution
