

**FREEZE  
YOUR  
PRODUCT  
FAST!**

## **QFR ZONE®**

**THE MOST EFFICIENT WAY  
TO FREEZE A PALLET!**

- EASY TO LOAD AND UNLOAD
- WORKS WITH FULL OR PARTIAL PALLETS
- ALSO WORKS WITH BARRELS, SCROUNDS, PAILS AND BUCKETS

COLD STORAGE EXCELLENCE

# HOW IT WORKS

High efficiency EC fan creates a vacuum capable of pulling air through or around palletized product.

Discharged warmed air is released and is distributed evenly for room evaporators to remove heat.

Side seals direct airflow through the pallet, allowing for efficient utilization of chilled air.

Chilled air is pulled through cases and spacers. The design directs the flow of air along the top, bottom and sides of all cases. Air flow provides superior heat transfer, allowing for reduced product freeze times.

Perforated plenum panel (P3) regulates pressure inside plenum to create uniform airflow throughout the system, regardless of product size or shape.

Pallet with spacers

Capable of freezing full or partial pallets

QFR Zone® fits within a standard rack configuration. No blast cell rooms required.

Pallet guides direct product/pallet into proper location.
